INTRODUCTION

1  
2 1. Plaintiffs Puget Soundkeeper Alliance, Columbia Riverkeeper, Spokane  
3 Riverkeeper, RE Sources for Sustainable Communities, Pacific Coast Federation of Fishermen’s  
4 Associations, and the Institute for Fisheries Resources bring suit under the Clean Water Act to  
5 secure relief against ongoing violations by the U.S. Environmental Protection Agency (“EPA”)  
6 of a non-discretionary duty under the Clean Water Act to promulgate standards necessary to  
7 meet the requirements of the Clean Water Act and to protect designated uses including the  
8 consumption of fish.

9 2. The Clean Water Act requires states (or the Environmental Protection Agency if  
10 states fail to do so) to develop water quality standards necessary to meet the requirements of the  
11 Clean Water Act, including to protect designated uses of water. 33 U.S.C. § 1313. Those  
12 designated uses encompass the “fishable and swimmable” protections of the Clean Water Act:  
13 protecting and cleaning up our nation’s waters such that they are clean enough for drinking, for  
14 direct human contact for fishing or recreation, for healthy aquatic resources, and for catching and  
15 consuming fish and shellfish. Water Quality Standards include criteria, often numeric,  
16 sometimes narrative, necessary to ensure that the designated uses are attained and protected.

17 3. One of the ways water pollution adversely affects human health is through the  
18 consumption of fish and shellfish that have accumulated toxic water pollutants in fish tissue.  
19 Therefore, determining the amount of fish people in a state actually consume is a critical  
20 component of setting human health water quality criteria. In setting human health water quality  
21 criteria, a state must set the level of toxic pollutants low enough that fish remain safe to eat. If a  
22 state sets the foundational water quality standard fish consumption rate lower than the amounts  
23 actually consumed, the commensurate human health criteria will be too lenient and people  
24 consuming fish will ingest levels of toxins that will put them at risk for adverse health  
25  
26

1 consequences. Failure to adopt human health criteria based on an accurate fish consumption rate  
2 is a failure to promulgate water quality standards that meet the requirements of the Clean Water  
3 Act.

4 4. Washington’s fish consumption rate is set at 6.5 grams per day (“g/day”). As  
5 such, it is not reflective of what people in Washington actually eat. Surveys of various  
6 communities in Washington show consumption rates of 200, 300, and even over 500 g/day.  
7 Therefore, Washington’s fish consumption rate, along with the criteria based on it, are not  
8 protective and are not adequate to meet the requirements of the Clean Water Act.

9 5. EPA has repeatedly informed Washington that its fish consumption rate is not  
10 accurate; that it does not reflect what people in Washington actually consume and that the rate  
11 and human health criteria based on Washington’s fish consumption rate must change. Neither  
12 Washington nor EPA has promulgated a new, accurate fish consumption rate or new, protective  
13 human health criteria.  
14

15 6. The Clean Water Act mandates that EPA step in to correct what EPA has  
16 repeatedly determined to be an inadequate standard. For the reasons explained below, EPA has  
17 violated its mandatory duty under the Clean Water Act, 33 U.S.C. § 1313(c)(4), by failing to  
18 promptly promulgate human health criteria based on an accurate fish consumption rate for  
19 Washington that adequately protects the fishable and swimmable uses required by the Clean  
20 Water Act.  
21

## 22 PARTIES

23 7. Plaintiff Puget Soundkeeper Alliance (“PSA”) is a non-profit organization,  
24 incorporated under the laws of Washington and recognized by the Internal Revenue Service as a  
25 tax-exempt organization under Section 501(c)(3) of the Internal Revenue Code. PSA’s donors  
26 and supporters reside on or near or recreate on or near the Puget Sound. PSA is located at 5305  
27

1 Shilshole Avenue N.W., Suite 150, Seattle, WA 98107. PSA's mission is to protect and preserve  
2 the waters of Puget Sound by monitoring, cleaning up, and preventing pollutants from entering  
3 its waters. To accomplish its mission, PSA actively monitors the Puget Sound, enlisting a  
4 network of trained volunteers to detect and report pollution. PSA actively engages government  
5 agencies and businesses working to regulate pollution discharges from sewage treatment plants,  
6 industrial facilities, construction sites, municipalities, and others. PSA frequently seeks  
7 enforcement of the Clean Water Act as part of its work to protect the Puget Sound.

8           8. Plaintiff Columbia Riverkeeper is a non-profit organization, incorporated under  
9 the laws of Washington and recognized by the Internal Revenue Service as a tax-exempt  
10 organization under Section 501(c)(3) of the Internal Revenue Code. Columbia Riverkeeper's  
11 donors and supporters reside on or near or recreate on the Columbia River, including residents in  
12 both the states of Washington and Oregon. Columbia Riverkeeper is located at 111 Third Street,  
13 Hood River, OR 97031. Columbia Riverkeeper's mission is to restore and protect the water  
14 quality of the Columbia River and all life connected to it, from the headwaters to the Pacific  
15 Ocean. To achieve its goals for the Columbia River watershed and estuary, Columbia  
16 Riverkeeper uses an integrated strategy of community-based grassroots organizing, public  
17 education, legal enforcement, and hands-on citizen involvement in tangible river protection  
18 projects. Enforcement of Clean Water Act laws and permits is an integral part of Columbia  
19 Riverkeeper's work on the Columbia River.

22           9. Plaintiff Spokane Riverkeeper is a program of the Center for Justice, a non-profit  
23 organization, incorporated under the laws of Washington and recognized by the Internal Revenue  
24 Service as a tax-exempt organization under Section 501(c)(3) of the Internal Revenue Code.  
25 Spokane Riverkeeper's donors and supporters reside on or near or recreate in the Spokane River  
26

1 Watershed. Spokane Riverkeeper is located at 35 W. Main Avenue, Suite 300, Spokane, WA  
2 99201. Spokane Riverkeeper is dedicated to protecting and restoring the health of the Spokane  
3 River Watershed. Spokane Riverkeeper accomplishes its goals by collaborating, educating, and,  
4 when necessary, litigating to preserve the Spokane River’s health through the Clean Water Act  
5 and other laws.

6 10. Plaintiff RE Sources for Sustainable Communities, Inc. (“RE Sources”) is a non-  
7 profit organization, incorporated under the laws of Washington and recognized by the Internal  
8 Revenue Service as a tax-exempt organization under Section 501(c)(3) of the Internal Revenue  
9 Code. RE Sources’s donors and supporters reside on or near or recreate on or near the northern  
10 Puget Sound. RE Sources is located at 2309 Meridian Street, Bellingham, WA 98225. North  
11 Sound Baykeeper (“Baykeeper”) is a program of RE Sources. Baykeeper works to protect and  
12 restore the marine and nearshore habitats of the northern Puget Sound region. Enforcement of  
13 Clean Water Act laws and permits is integral to achieving Baykeeper’s goals.

15 11. Plaintiff Pacific Coast Federation of Fishermen’s Associations (“PCFFA”) is a  
16 trade association of commercial fishing families that works to protect fish and fish habitat from  
17 pollution and to promote restoration where fish habitat and health are degraded. PCFFA’s  
18 principal place of business is in San Francisco, California, and a Northwest Regional Office is  
19 located in Eugene, Oregon. PCFFA is the largest organization of commercial fishermen on the  
20 west coast. It consists of a federation of 15 smaller commercial fishermen’s vessel owners’  
21 associations, trade associations, port associations, and marketing associations with membership  
22 throughout Washington, Oregon, and California. PCFFA also has “at-large” members who are  
23 unaffiliated with any particular fishermen’s association but have become individual members of  
24 PCFFA. Collectively, PCFFA represents nearly 1,200 west coast commercial fishing families.

1 Many of PCFFA's members derive all or part of their income from the harvesting of fish in or  
2 near Washington waters or fish that originate in Washington waters. Failure to adequately  
3 protect fish and fish consumers impairs the commercial interests of PCFFA and its members.

4 12. Plaintiff Institute for Fisheries Resources ("IFR") is a California non-profit  
5 organization that works to protect and restore fish populations and the human economies that  
6 depend on them by establishing alliances among fishing men and women, with government  
7 agencies, and with concerned citizens. IFR advocates for reforms to protect fish health and  
8 habitat throughout the U.S. West Coast and has successfully advocated for dam removals,  
9 improved pesticide controls, and enhanced marine and watershed conservation regulations  
10 throughout the West Coast. IFR's principle place of business is in San Francisco, California, and  
11 IFR also maintains a Northwest Regional Office in Eugene, Oregon. Most of IFR's at least 850  
12 contributors are commercial fishermen. IFR and PCFFA have common Board members, general  
13 membership, and staff; however, IFR is a separate organization that focuses on marine resources  
14 protection and conservation. IFR and its members are directly and indirectly injured by failure to  
15 adequately protect fish and fish consumers in Washington.  
16

17 13. Defendant United States Environmental Protection Agency is an agency of the  
18 United States charged with overseeing and approving or disapproving state water quality  
19 standards under 33 U.S.C. § 1313.  
20

21 14. Defendant Gina McCarthy, the Administrator of EPA, is the chief officer of EPA,  
22 the federal official ultimately responsible for EPA's administration and implementation of its  
23 legal duties. Administrator McCarthy is sued in her official capacity.

24 15. Plaintiffs have representational standing to bring this action. EPA's violations of  
25 the Clean Water Act have had an adverse impact on Plaintiffs and Plaintiffs' members' ability to  
26

1 use and enjoy water bodies in Washington State and have injured the health, recreational,  
2 environmental, aesthetic, commercial, and/or other interests of Plaintiffs and their members.  
3 These injuries are fairly traceable to EPA's violations and capable of redress by action of this  
4 Court.

5 16. Plaintiffs have organizational standing to bring this action. Plaintiffs have been  
6 actively engaged in a variety of educational and advocacy efforts to improve water quality and to  
7 improve protective health standards such as the fish consumption rate in the waters of  
8 Washington State. EPA's failure to comply with the requirements of the Clean Water Act by  
9 failing to promptly promulgate human health criteria water quality standards based upon a  
10 protective fish consumption rate for Washington State after having determined that a new  
11 standard is necessary has adversely affected Plaintiffs. These injuries are fairly traceable to  
12 Defendants' violations and redressable by the Court.

#### 14 JURISDICTION AND VENUE

15 17. This Court has jurisdiction of this matter pursuant to Section 505(a) of the Federal  
16 Water Pollution Control Act (hereinafter "The Clean Water Act"). 33 U.S.C. § 1365(a). The  
17 relief requested is authorized by 33 U.S.C. § 1365(a) and (d).

18 18. Venue is properly vested in this Court under 28 U.S.C. § 1391(e) because  
19 Plaintiffs PSA and Baykeeper reside and maintain headquarters in the Western District of  
20 Washington and because the subject of the Complaint is EPA's inaction with respect to  
21 Washington's fish consumption standards and attendant criteria for toxic contaminants.

22 19. More than 60 days prior to the filing of this action, the Plaintiffs, pursuant to  
23 33 U.S.C. § 1365, gave notice of the violation to the Administrator of the United States  
24 Environmental Protection Agency. A true and correct copy of the Notices are attached hereto as  
25 Exhibits A and B and incorporated by this reference.  
26

LEGAL AND FACTUAL BACKGROUND

20. The CWA requires states to set water quality standards necessary to achieve the requirements of the Clean Water Act: to restore and maintain the chemical, physical, and biological integrity of the nation’s waters, including the protection and propagation of fish and shellfish, and to prohibit pollution to water in toxic amounts. 33 U.S.C. §§ 1251 and 1313. Water quality standards must ensure that designated uses of waters such as protection of consumption of fish and swimming are achieved and maintained. *Id.* and 40 C.F.R. §§ 131.2 and 131.3(i).

21. A required part of a state’s water quality standards is use designations and water quality criteria necessary to protect those designated uses. 40 C.F.R. §§ 131.6 and 131.10.

22. For toxic pollutants, Washington continues to rely on 40 C.F.R. § 131.36, the National Toxics Rule, promulgated by EPA in 1992. 57 Fed. Reg. 60,848 (Dec. 22, 1992). Through its continued reliance on this rule, Washington assumes a designated fish consumption use of only 6.5 g/day, one of the nation’s lowest fish consumption rates.

23. Starting in 2000, EPA guidance has directed states to move away from relying on the National Toxics Rule for human health water quality criteria as it is outdated and based upon inaccurate assumptions regarding fish consumption rates underlying the development of human health water quality criteria, and generally not adequately protective of human health. Rather, through the guidance, EPA directed states to set updated fish consumption rates (and attendant human health criteria) that are based on the best available data, particularly local consumer surveys that reflect the amount of fish local populations actually consume in order to fully-protect that designated use. EPA, *Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health* at 1-12 (2000), available at <http://perma.cc/0Ug1xn41Q88>.

1 Shortly after EPA issued its 2000 guidance on fish consumption and human health criteria, a  
2 Federal Advisory Committee to EPA issued a Report regarding the need for states to ensure that  
3 all populations are protected, including those that have particularly high fish consumption rates  
4 for cultural, religious, social and/or economic reasons. National Environmental Justice Advisory  
5 Committee, *Fish Consumption and Environmental Justice* (2002), available at  
6 <http://perma.cc/0D64qSMD6s8> (“Environmental Justice Report”). The Environmental Justice  
7 Report confirmed and emphasized the need for states to use data reflective of actual consumption  
8 rates of various communities and to set standards that are protective of consumers at those rates.  
9 *Id.* at 30-32. The Environmental Justice Report also emphasized the need to consider that some  
10 consumption rates may currently be suppressed due to reduced fish availability and other factors.  
11 *Id.* at 43-49.

12  
13 24. Actual consumption of fish by residents of Washington is far greater than 6.5  
14 g/day.

15 25. Surveys of various communities in Washington—a number of which were cited  
16 by EPA in its 2000 Guidance and in the 2002 Environmental Justice Report—from Native  
17 American tribal members to members of the Pacific Islander and Asian communities to  
18 recreational fishermen, show consumption rates well in excess of 6.5 g/day. Some surveys show  
19 consumption rates of 200, 300, and over 500 g/day, even without considering suppressed  
20 consumption due to severely reduced stocks of salmon, shellfish, and other fish relied upon by  
21 various Washington residents.

22  
23 26. The Clean Water Act requires that where EPA has determined a state’s water  
24 quality standard does not meet the requirements of the Clean Water Act and that a new or revised  
25 standard is necessary to comply with the requirements of the Clean Water Act, EPA must

1 promptly promulgate a new or revised standard and finalize that standard within 90 days of  
2 publishing the proposed standard unless the state steps in and corrects the problem. *See*  
3 33 U.S.C. § 1313(c)(4).

4 27. EPA has repeatedly informed the State of Washington, Department of Ecology  
5 (“Ecology”) that Washington’s human health criteria water quality standards are not adequate to  
6 meet the requirements of the Clean Water Act because they are based upon an inaccurate fish  
7 consumption rate and that Washington’s reliance on the National Toxics Rule (“NTR”) assumed  
8 consumption rate of 6.5 g/day is wholly inadequate to protect fish consumers. Finally, EPA has  
9 repeatedly informed the State of Washington that a new fish consumption standard and human  
10 health criteria is therefore necessary.

11  
12 28. EPA’s communications to Washington are consistent with its repeated statements  
13 in guidance to all states over a decade ago that the NTR rate of 6.5 g/day is inaccurate and  
14 inadequate as a whole, and that it is especially not protective of fishing uses and consumption in  
15 various communities that rely heavily on fishing, using communities in Washington State as  
16 examples.

17 29. In addition to the plain statements in numerous guidance documents about the  
18 need for locally-accurate and protective fish consumption rates as an integral and necessary part  
19 of water quality standards, EPA has issued at least the following specific written  
20 communications to Washington regarding Washington’s insufficient fish consumption rate.

- 21  
22 a. On November 10, 2010, Jannine Jennings, Manager of the Water Quality  
23 Standards Unit for Region 10, sent an email to Ecology noting that EPA would  
24 shortly send comments on Washington State’s triennial water quality standards  
25  
26

1 review “stating EPA’s desire for Washington to move forward with revisions to  
2 the human health criteria in order to incorporate a higher fish consumption rate.”

3 b. On December 16, 2010, Ms. Jennings submitted comments on the Washington  
4 State triennial review, commenting on behalf of EPA. She stated: “EPA urges  
5 Ecology to make the revision of Washington’s human health criteria the most  
6 important priority in this Triennial Review.” Ms. Jennings also pointed out that  
7 “this is a priority for Region 10,” and “Washington’s human health criteria were  
8 issued by EPA in 1992 through the National Toxics Rule (NTR). The human  
9 health criteria are not in the State’s WQS and Washington is one of a handful of  
10 states remaining in the NTR for human health criteria.” Ms. Jennings pointed out  
11 that in 2000, EPA updated its methodology for deriving human health criteria,  
12 recommending that states use a fish consumption rate that accurately represents  
13 local populations to be protected wherever local information about fish  
14 consumption is available. She then stated, “EPA believes that a fish consumption  
15 rate of 6.5 grams per day is not reflective of fish and shellfish consumers in the  
16 State of Washington,” and that Ecology should examine EPA’s most recent  
17 criteria documents and other studies to determine an appropriate rate for criteria  
18 that will be protective of the state’s designated uses.

19  
20  
21 c. On January 17, 2012, Ms. Jennings sent a letter to Kelly Susewind (Washington  
22 State Department of Ecology Water Quality Program) and Jim Pendowski  
23 (Washington State Department of Ecology Toxics Cleanup Program) providing  
24 comments on Ecology’s draft Technical Support Document for Sediment  
25 Standards. Ms. Jennings repeats statements from the 2010 letter that criteria must  
26

1 protect designated uses, must be scientifically based, and for human health criteria  
2 and fish consumption rates, Ecology should use local data as the preferred  
3 foundation. Ms. Jennings also repeats that Washington currently relies on a fish  
4 consumption rate of 6.5 g/day and noted “as identified in your draft document,  
5 several studies of Northwest populations indicate that this rate is not reflective of  
6 the amount of fish and shellfish consumed by some in the state of Washington.  
7 Therefore, it is appropriate and consistent with EPA guidance for Ecology to  
8 examine the current science to determine an appropriate fish consumption  
9 rate . . . .” Shortly thereafter in the letter, Ms. Jennings stated “we encourage you  
10 to quickly incorporate this information [from tribal and other surveys] into your  
11 rulemaking process and move forward with adopting revised criteria.”

12 Ms. Jennings summarized that “EPA believes the information is currently  
13 available to make decisions on these matters and requests Ecology to quickly  
14 move through the process necessary to do so.” She closed by repeating that this is  
15 a priority for EPA Region 10.  
16

- 17 d. EPA’s Regional Administrator Dennis McLerran wrote to Ecology’s Director  
18 Maia Bellon on June 13, 2013 stating: “The best available science includes  
19 evidence of consumption rates well above 6.5 grams per day among high fish  
20 consumers and shows that the human health criteria currently in effect for clean  
21 water purposes in Washington are not sufficiently protective.” Regional  
22 Administrator McLerran also points out that “[t]he EPA believes there are  
23 scientifically sound regional and local data available in Washington that are  
24  
25  
26  
27

1 sufficient for Ecology to move forward in choosing a protective and accurate fish  
2 consumption rate at this time.”

3 30. EPA has determined, under 33 U.S.C. § 1313(c)(4), that Washington’s current  
4 human health criteria and fish consumption rate are inadequate.

5 31. EPA has a mandatory obligation to promptly promulgate protective fish  
6 consumption rate and attendant human health criteria for the State of Washington and to finalize  
7 the standards and criteria within ninety days from publication of its proposal.

8  
9 **FIRST CAUSE OF ACTION**

10 32. Plaintiffs restate and reallege all preceding paragraphs.

11 33. EPA has determined that Washington’s current human health criteria and fish  
12 consumption rate are inadequate to protect designated uses under the Clean Water Act and that a  
13 revised or new fish consumption rate and attendant human health criteria is necessary in order to  
14 protect Washington fish consumers and fishing designated uses under the Clean Water Act.

15 34. EPA has violated its mandatory duty under the Clean Water Act, 33 U.S.C.  
16 § 1313(c)(4), by failing to promptly promulgate human health criteria based on an accurate fish  
17 consumption rate for Washington that adequately protects designated uses after determining that  
18 Washington’s current fish consumption rate and human health criteria are inadequate.

19 35. EPA’s continuing violations have caused and will continue to cause direct and  
20 immediate harm to fish consumers in Washington.

21 36. EPA’s continuing violations injure the health, recreational, environmental,  
22 aesthetic, commercial, and/or other interests of Plaintiffs and their members.

23 37. Based upon the foregoing and 33 U.S.C. § 1313(c)(4), Plaintiffs are entitled to an  
24 order requiring EPA to promptly prepare and publish proposed regulations setting forth a revised  
25 fish consumption rate and attendant human health criteria for Washington State and to  
26

1 promulgate the revised standards no later than ninety days after publishing the proposed  
2 standards.

3 REQUEST FOR RELIEF

4 BASED UPON THE FOREGOING, Plaintiffs request the following relief:

5 A. A declaration that EPA is in violation of the Clean Water Act by failing to  
6 propose and adopt a revised fish consumption rate for Washington after determining that a  
7 revision of Washington's current fish consumption rate is necessary to comply with the Clean  
8 Water Act;

9 B. A declaration that EPA is in violation of the Clean Water Act by failing to  
10 propose and adopt human health criteria for toxic pollutants based on a revised fish consumption  
11 rate for Washington after determining that a revision of Washington's current fish consumption  
12 rate is necessary to comply with the Clean Water Act;

13 C. An injunction requiring EPA to comply with the Clean Water Act by preparing  
14 and publishing proposed regulations in the Federal Register setting forth a revised fish  
15 consumption rate for Washington within sixty days of the Court's order and promulgating the  
16 revised standard no later than ninety days after the date of publication of the revised standard in  
17 the Federal Register pursuant to 33 U.S.C. § 1313(c)(4);

18 D. An award of Plaintiffs' costs and reasonable attorneys' fees pursuant to 33 U.S.C.  
19 § 1365; and

20 E. Such further relief as the Court deems just and equitable.  
21  
22  
23  
24  
25  
26  
27

1 Respectfully submitted this 11th day of October, 2013.

Re: Notice of Violation of Non-Discretionary Duty to Propound Washington State  
Fish Consumption Rate Under Section 303 of the Clean Water Act, 33 U.S.C.  
§ 1313

Dear Ms. McCarthy and Mr. McLerran:

On behalf of Columbia Riverkeeper, Puget Soundkeeper Alliance, Spokane Riverkeeper, and North Sound Baykeeper (“Waterkeepers Washington”),<sup>1</sup> we ask that you take immediate action to remedy ongoing violations of a non-discretionary duty under the Clean Water Act (“CWA”) by the United States Environmental Protection Agency (“EPA”). As described fully below, EPA is in violation of Clean Water Act section 303 (33 U.S.C. § 1313(c)(4)), due to its failure to promptly promulgate human health criteria water quality standards based upon a protective fish consumption rate for Washington State after having “determine[d] that a revised or new standard is necessary to meet the requirements of [CWA section 303].” This letter constitutes a 60-day notice of intent to file a citizen suit against EPA pursuant to Section 505 of the CWA, 33 U.S.C. § 1365.

Washington State lags far behind other states when it comes to stopping toxic pollution and protecting people who regularly eat locally caught fish. Studies across Washington State show serious problems with toxic pollution accumulating in fish and shellfish that people

---

<sup>1</sup> Waterkeepers Washington are members of the international Waterkeeper Alliance.

regularly eat. The large number of fish advisories (PCBs, DDT, mercury and lead)—advising people to limit or stop eating certain kinds of fish—reflects the severity of the problem.

Washington’s water quality standards—the amount of pollution a state deems tolerable—simply allow too much toxic pollution because the formula used to develop these standards assumes that people eat very little fish. Yet surveys of tribes in Washington show consumption rates of 200, 300 and even over 500 grams per day, even with the suppressed consumption due to severely reduced stocks of salmon, shellfish, and other fish relied upon by these tribes. Despite these facts, Washington has relied on one of the nation’s lowest fish consumption rates—6.5 grams per day—for nearly two decades. By using a low fish consumption rate, Washington’s human health criteria water quality standards, which are intended to protect public health and aquatic resources, fail to achieve these objectives. For the reasons explained below, EPA has violated its mandatory duty under the CWA, 33 U.S.C. § 1313(c)(4), by failing to promptly promulgate human health criteria based on an accurate fish consumption rate for Washington that adequately protects designated uses, including for subsistence populations in the state.

## I. BACKGROUND

The CWA requires states to set water quality standards that are protective of the “fishable and swimmable” goals of the Act. *See* 33 U.S.C. § 1313. In particular, water quality standards are required to ensure that designated uses of waters are achieved and maintained. EPA is directed to review and approve or disapprove states’ water quality standards, and if EPA disapproves a standard or determines a revised or new standard is necessary to meet the requirements of the CWA, EPA is required to step in and promptly promulgate the standards for the state. *See id* § 1313(c)(4). EPA has repeatedly emphasized the necessity of setting fish consumption rates that protect the ability of people to eat normal, healthy amounts of fish (a designated use) without taking on a burden of toxic chemicals.

Long-time EPA guidance directs states to move away from the outdated National Toxics Rule (“NTR”) for setting fish consumption rates for water quality, and instead to set updated fish consumption rates that are based upon the best available data, particularly local surveys, that reflect the levels of fish that local populations actually consume in order to fully-protect that designated use.

Despite EPA guidance and specific direction, Washington has never properly adopted a fish consumption rate as part of its state water quality standards and instead relies on the outdated NTR that provides for consumption of only 6.5 grams of fish or shellfish a day, about the amount that fits on a cracker, slightly less than ½ pound a month. In the Pacific Northwest, community surveys dating back a decade, repeatedly acknowledged and utilized by EPA in various guidance documents and directions to states, show that fish is consumed at a higher rate than many other parts of the nation, and certain populations consume fish at significantly higher rates than the general population. Surveys of Native American tribes in Washington show

consumption rates of 796 and 205-280 grams per day (“g/day”),<sup>2</sup> even with consumption suppressed due to severely reduced stocks and contamination of salmon, shellfish, and other fish relied upon by these tribes.<sup>3</sup> A survey of Pacific-Asian communities in the Puget Sound region reflect consumption rates of 170 g/day. *See, e.g.,* Nat’l Environmental Justice Advisory Council Meeting (a Federal Advisory Committee to the U.S. Environmental Protection Agency), *Fish Consumption and Environmental Justice* (Dec. 2001 (rev’d Nov. 2002)) (“Environmental Justice Report”); EPA, *Guidance for Assessing Chemical Contaminant Data for Use in Fish Advisories, Vol. 2 Risk Assessment and Fish Consumption Limits, 3d ed.*, at 1-6 through 1-9 (Nov. 2000) (“Fish Advisories Guidance”).

II. THE EPA ADMINISTRATOR IS IN VIOLATION OF A NON-DISCRETIONARY DUTY BY FAILING TO PROMPTLY PROMULGATE A FISH CONSUMPTION RATE FOR THE STATE OF WASHINGTON.

A. Legal Framework.

The CWA requires the development of water quality standards, which are narrative and/or numeric standards designed to protect designated uses of our nation’s waters. In short, water quality standards are required to protect the integrity of our nation’s waters for “fishing and swimming;” that is they are to protect the biological and human health needs associated with our waters. 33 U.S.C. §§ 1251 & 1313. The CWA provides for a dual state and federal effort in ensuring that those requirements of the law are timely and well met.

While a state is given the first opportunity to set water quality standards that meet those requirements, the law assigns EPA the critical role of oversight to ensure that the state acts promptly to develop and keep current protective water quality standards and to quickly step in if the state does not. *Id.* § 1313(a) through (c). Specific to the issues here, the CWA requires that where EPA has determined a state’s water quality standard does not meet the requirements of the CWA and that a new or revised standard is necessary to comply with the requirements of the CWA, EPA must promptly promulgate a new or revised standard and finalize that standard within 90 days of publishing the proposed standard unless the state steps in and corrects the problem. *See* 33 U.S.C. § 1313(c)(4). This provision makes clear that EPA has a duty to act.

---

<sup>2</sup> In 2008, a fish consumption rate of 586 g/day was established for native subsistence consumers on the Lower Elwha, related to the Rayonier cleanup near Port Angeles, Washington.

<sup>3</sup> Failing to take into account suppression of consumption due to depletion and contamination factors also leads to a downward water- and fish-contamination spiral where consumers are not adequately protected so they eat less fish out of fear of the higher levels of contamination that have been allowed (based on suppressed instead of accurate consumption rates), which in turn affects future surveys. This is the polar opposite of the Clean Water Act’s direction to restore and maintain the chemical, physical, and biological integrity of our nation’s waters.

B. EPA's Violation.

EPA has repeatedly informed the State of Washington, Department of Ecology that EPA has determined Washington's human health criteria water quality standards lack an accurate fish consumption rate related to water toxins that affect human health,<sup>4</sup> and that Washington's reliance on the NTR assumed consumption rate of 6.5 g/day is wholly inadequate to protect *any* fish consumers, much less tribes and other subsistence populations, and that a new standard is therefore necessary. EPA's communications to Washington are consistent with its repeated statements in guidance to *all* states over a decade ago that the NTR rate of 6.5 g/day is inaccurate and inadequate as a whole, and that it is especially not protective of fishing uses and consumption in various communities that rely heavily on fishing. *See* Fish Advisories Guidance, at 1-4 through 1-9 and Appendix B. *See also* Environmental Justice Report at 27-33. Interestingly, EPA's guidance and instruction to states to gather and rely on local data is based in large measure upon consumption surveys of tribes and Pacific-Asian populations *in Washington State*. *Id.*; *see also*, Environmental Justice Report at 30. Despite the fact that EPA has, for a decade, made plain that 6.5 g/day is not protective of any fish consumer, much less communities in Washington such as tribes, Washington has failed to adopt a protective standard and in so doing has failed to protect and maintain designated uses.

In addition to the plain statements in numerous guidance documents about the need and process for locally-accurate and protective fish consumption rates as an integral and necessary part of water quality standards, EPA has issued specific written communications on Washington's lack of a standard. On November 10, 2010, Jannine Jennings, Manager of the Water Quality Standards Unit for Region 10, sent an email to the Washington State Department of Ecology ("Ecology") noting that EPA would shortly send comments on Washington State's triennial review "stating EPA's desire for Washington to move forward with revisions to the human health criteria in order to incorporate a higher fish consumption rate."

On December 16, 2010, Ms. Jennings submitted comments on the Washington State triennial review, commenting on behalf of EPA. Ms. Jennings pointed out that federal regulation requires states to adopt criteria to protect all designated uses and that such criteria must be based on a sound scientific rationale and contain sufficient parameters to protect the use. She stated: "EPA urges Ecology to make the revision of Washington's human health criteria the most important priority in this Triennial Review." Ms. Jennings also pointed out that "this is a priority for Region 10," and "Washington's human health criteria were issued by EPA in 1992 through the National Toxics Rule (NTR). The human health criteria are not in the State's WQS and

---

<sup>4</sup> It is important to note that while human health is a focus, it is also critical that EPA and the state recognize and protect uses that encompass social, cultural, and religious components of fish use and consumption among various subsistence populations, particularly Pacific Northwest tribes. *See* Environmental Justice Report, at 56-59.

Washington is one of a handful of states remaining in the NTR for human health criteria.” Ms. Jennings pointed out that in 2000, EPA updated its methodology for deriving human health criteria, recommending that states use a fish consumption rate that accurately represents local populations to be protected wherever local information about fish consumption is available. She then stated, “*EPA believes that a fish consumption rate of 6.5 grams per day is not reflective of fish and shellfish consumers in the State of Washington,*” and that Ecology should examine EPA’s most recent criteria documents and other studies to determine an appropriate rate for criteria that will be protective of the state’s designated uses (emphasis added).

On November 17, 2012, Ms. Jennings sent a letter to Kelly Susewind (Washington State Department of Ecology Water Quality Program) and Jim Pendowski (Washington State Department of Ecology Toxics Cleanup Program) providing comments on Ecology’s draft Technical Support Document for the Sediment Standards. Ms. Jennings repeats statements from the 2010 letter that criteria must protect designated uses, must be scientifically based, and for human health criteria and fish consumption rates, Ecology should use local data as the preferred foundation. Ms. Jennings also repeats that Washington currently has a rate of 6.5 g/day and noted “as identified in your draft document, several studies of Northwest populations indicate that this rate is not reflective of the amount of fish and shellfish consumed by some in the state of Washington. Therefore, it is appropriate and consistent with EPA guidance for Ecology to examine the current science to determine an appropriate fish consumption rate . . . .” Shortly thereafter in the letter, Ms. Jennings stated “we encourage you to quickly incorporate this information [from tribal and other surveys] into your rulemaking process and move forward with adopting revised criteria.” Ms. Jennings summarized that “EPA believes the information is currently available to make decisions on these matters and requests Ecology to quickly move through the process necessary to do so.” She closed by repeating that this is a priority for EPA Region 10.<sup>5</sup>

Finally, most recently, EPA’s Regional Administrator Dennis McLerran wrote to Ecology’s Director Maia Bellon on June 13, 2013 stating: “The best available science includes evidence of consumption rates well above 6.5 grams per day among high fish consumers and shows that the human health criteria currently in effect for clean water purposes in Washington are not sufficiently protective.” Administrator McLerran also points out that “[t]he EPA believes there are scientifically sound regional and local data available in Washington that are sufficient for Ecology to move forward in choosing a protective and accurate fish consumption rate at this time.”

---

<sup>5</sup> In related activity on Washington’s sediment standards, on October 17, 2011, Lon Kissinger, scientific and technical staff at EPA, noted that even the 54 g/day used by Washington in site cleanup work was inadequate given that “fish and shellfish consumption surveys from the Pacific Northwest indicate that there are groups of individuals, most notably tribes, which consume much more seafood than Ecology’s default rate.”

EPA has determined and communicated to Washington that Washington's current human health criteria and fish consumption rate are inadequate to protect designated uses under the Clean Water Act and that a revised or new fish consumption rate is necessary in order to protect Washington fish consumers and fishing designated uses under the Clean Water Act. EPA has violated its mandatory duty under the CWA, 33 U.S.C. § 1313(c)(4), by failing to promptly promulgate human health criteria based on an accurate fish consumption rate for Washington that adequately protects designated uses, including for subsistence populations in the state.

#### CONCLUSION

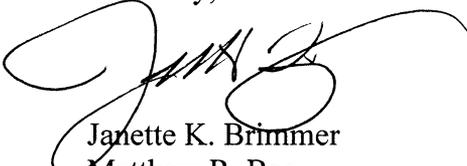

EPA is in continuing violation of the CWA. Waterkeepers Washington provide this Notice for the continuing violation outlined above, including if the violation continues subsequent to the date of this Notice. This Notice is given pursuant to 33 U.S.C. § 1365.

U.S. EPA  
July 23, 2013  
Page 7

Waterkeepers Washington send this notice only after years of unsuccessful attempts to persuade Washington State and EPA to protect people who eat fish by adopting accurate, protective human health criteria water quality standards. Waterkeepers Washington continue to believe that this issue should be resolved without the initiation of litigation and without devoting resources to court proceedings. We stand ready to work with you in good faith to resolve EPA's violations. However, unless this violation is cured within sixty days by the promulgation of a proposed rule incorporating an accurate fish consumption rate into new human health criteria, we reserve the right to take appropriate legal action to compel EPA to comply with the CWA and to protect consumers of fish and shellfish in Washington State.

Please contact the undersigned should you have any questions.

Sincerely,

Janette K. Brimmer

Re: Notice of Violation of Non-Discretionary Duty to Propound Washington State  
Fish Consumption Rate Under Section 303 of the Clean Water Act, 33 U.S.C.  
§ 1313

Dear Ms. McCarthy and Mr. McLerran:

On behalf of Pacific Coast Federation of Fishermen's Associations ("PCFFA") and the Institute for Fisheries Resources ("IFR"),<sup>1</sup> we ask that you take immediate action to remedy ongoing violations of a non-discretionary duty under the Clean Water Act ("CWA") by the United States Environmental Protection Agency ("EPA"). As described fully below, EPA is in violation of Clean Water Act section 303 (33 U.S.C. § 1313(c)(4)), due to its failure to promptly promulgate human health criteria water quality standards based upon a protective fish consumption rate for Washington State after having "determine[d] that a revised or new standard is necessary to meet the requirements of [CWA section 303]." This letter constitutes a 60-day notice of intent to file a citizen suit against EPA pursuant to Section 505 of the CWA, 33 U.S.C. § 1365.

Washington State lags far behind other states when it comes to stopping toxic pollution and protecting people who regularly eat locally caught fish. Studies across Washington State

---

<sup>1</sup> This letter is a duplicate of and intended to supplement and not replace the letter dated July 23, 2013 on behalf of Waterkeepers Washington.

show serious problems with toxic pollution accumulating in fish and shellfish that people regularly eat. The large number of fish advisories (PCBs, DDT, mercury and lead)—advising people to limit or stop eating certain kinds of fish—reflects the severity of the problem.

Washington’s water quality standards—the amount of pollution a state deems tolerable—simply allow too much toxic pollution because the formula used to develop these standards assumes that people eat very little fish. Yet surveys of tribes in Washington show consumption rates of 200, 300 and even over 500 grams per day, even with the suppressed consumption due to severely reduced stocks of salmon, shellfish, and other fish relied upon by these tribes. Despite these facts, Washington has relied on one of the nation’s lowest fish consumption rates—6.5 grams per day—for nearly two decades. By using a low fish consumption rate, Washington’s human health criteria water quality standards, which are intended to protect public health and aquatic resources, fail to achieve these objectives. For the reasons explained below, EPA has violated its mandatory duty under the CWA, 33 U.S.C. § 1313(c)(4), by failing to promptly promulgate human health criteria based on an accurate fish consumption rate for Washington that adequately protects designated uses, including for subsistence populations in the state.

## I. BACKGROUND

The CWA requires states to set water quality standards that are protective of the “fishable and swimmable” goals of the Act. *See* 33 U.S.C. § 1313. In particular, water quality standards are required to ensure that designated uses of waters are achieved and maintained. EPA is directed to review and approve or disapprove states’ water quality standards, and if EPA disapproves a standard or determines a revised or new standard is necessary to meet the requirements of the CWA, EPA is required to step in and promptly promulgate the standards for the state. *See id* § 1313(c)(4). EPA has repeatedly emphasized the necessity of setting fish consumption rates that protect the ability of people to eat normal, healthy amounts of fish (a designated use) without taking on a burden of toxic chemicals.

Long-time EPA guidance directs states to move away from the outdated National Toxics Rule (“NTR”) for setting fish consumption rates for water quality, and instead to set updated fish consumption rates that are based upon the best available data, particularly local surveys, that reflect the levels of fish that local populations actually consume in order to fully-protect that designated use.

Despite EPA guidance and specific direction, Washington has never properly adopted a fish consumption rate as part of its state water quality standards and instead relies on the outdated NTR that provides for consumption of only 6.5 grams of fish or shellfish a day, about the amount that fits on a cracker, slightly less than ½ pound a month. In the Pacific Northwest, community surveys dating back a decade, repeatedly acknowledged and utilized by EPA in various guidance documents and directions to states, show that fish is consumed at a higher rate than many other parts of the nation, and certain populations consume fish at significantly higher

rates than the general population. Surveys of Native American tribes in Washington show consumption rates of 796 and 205-280 grams per day (“g/day”),<sup>2</sup> even with consumption suppressed due to severely reduced stocks and contamination of salmon, shellfish, and other fish relied upon by these tribes.<sup>3</sup> A survey of Pacific-Asian communities in the Puget Sound region reflect consumption rates of 170 g/day. *See, e.g.,* Nat’l Environmental Justice Advisory Council Meeting (a Federal Advisory Committee to the U.S. Environmental Protection Agency), *Fish Consumption and Environmental Justice* (Dec. 2001 (rev’d Nov. 2002)) (“Environmental Justice Report”); EPA, *Guidance for Assessing Chemical Contaminant Data for Use in Fish Advisories, Vol. 2 Risk Assessment and Fish Consumption Limits, 3d ed.*, at 1-6 through 1-9 (Nov. 2000) (“Fish Advisories Guidance”).

II. THE EPA ADMINISTRATOR IS IN VIOLATION OF A NON-DISCRETIONARY DUTY BY FAILING TO PROMPTLY PROMULGATE A FISH CONSUMPTION RATE FOR THE STATE OF WASHINGTON.

A. Legal Framework.

The CWA requires the development of water quality standards, which are narrative and/or numeric standards designed to protect designated uses of our nation’s waters. In short, water quality standards are required to protect the integrity of our nation’s waters for “fishing and swimming;” that is they are to protect the biological and human health needs associated with our waters. 33 U.S.C. §§ 1251 & 1313. The CWA provides for a dual state and federal effort in ensuring that those requirements of the law are timely and well met.

While a state is given the first opportunity to set water quality standards that meet those requirements, the law assigns EPA the critical role of oversight to ensure that the state acts promptly to develop and keep current protective water quality standards and to quickly step in if the state does not. *Id.* § 1313(a) through (c). Specific to the issues here, the CWA requires that where EPA has determined a state’s water quality standard does not meet the requirements of the CWA and that a new or revised standard is necessary to comply with the requirements of the CWA, EPA must promptly promulgate a new or revised standard and finalize that standard

---

<sup>2</sup> In 2008, a fish consumption rate of 586 g/day was established for native subsistence consumers on the Lower Elwha, related to the Rayonier cleanup near Port Angeles, Washington.

<sup>3</sup> Failing to take into account suppression of consumption due to depletion and contamination factors also leads to a downward water- and fish-contamination spiral where consumers are not adequately protected so they eat less fish out of fear of the higher levels of contamination that have been allowed (based on suppressed instead of accurate consumption rates), which in turn affects future surveys. This is the polar opposite of the Clean Water Act’s direction to restore and maintain the chemical, physical, and biological integrity of our nation’s waters.

within 90 days of publishing the proposed standard unless the state steps in and corrects the problem. *See* 33 U.S.C. § 1313(c)(4). This provision makes clear that EPA has a duty to act.

B. EPA's Violation.

EPA has repeatedly informed the State of Washington, Department of Ecology that EPA has determined Washington's human health criteria water quality standards lack an accurate fish consumption rate related to water toxins that affect human health,<sup>4</sup> and that Washington's reliance on the NTR assumed consumption rate of 6.5 g/day is wholly inadequate to protect *any* fish consumers, much less tribes and other subsistence populations, and that a new standard is therefore necessary. EPA's communications to Washington are consistent with its repeated statements in guidance to *all* states over a decade ago that the NTR rate of 6.5 g/day is inaccurate and inadequate as a whole, and that it is especially not protective of fishing uses and consumption in various communities that rely heavily on fishing. *See* Fish Advisories Guidance, at 1-4 through 1-9 and Appendix B. *See also* Environmental Justice Report at 27-33. Interestingly, EPA's guidance and instruction to states to gather and rely on local data is based in large measure upon consumption surveys of tribes and Pacific-Asian populations *in Washington State*. *Id.*; *see also*, Environmental Justice Report at 30. Despite the fact that EPA has, for a decade, made plain that 6.5 g/day is not protective of any fish consumer, much less communities in Washington such as tribes, Washington has failed to adopt a protective standard and in so doing has failed to protect and maintain designated uses.

In addition to the plain statements in numerous guidance documents about the need and process for locally-accurate and protective fish consumption rates as an integral and necessary part of water quality standards, EPA has issued specific written communications on Washington's lack of a standard. On November 10, 2010, Jannine Jennings, Manager of the Water Quality Standards Unit for Region 10, sent an email to the Washington State Department of Ecology ("Ecology") noting that EPA would shortly send comments on Washington State's triennial review "stating EPA's desire for Washington to move forward with revisions to the human health criteria in order to incorporate a higher fish consumption rate."

On December 16, 2010, Ms. Jennings submitted comments on the Washington State triennial review, commenting on behalf of EPA. Ms. Jennings pointed out that federal regulation requires states to adopt criteria to protect all designated uses and that such criteria must be based on a sound scientific rationale and contain sufficient parameters to protect the use. She stated: "EPA urges Ecology to make the revision of Washington's human health criteria the most important priority in this Triennial Review." Ms. Jennings also pointed out that "this is a priority

---

<sup>4</sup> It is important to note that while human health is a focus, it is also critical that EPA and the state recognize and protect uses that encompass social, cultural, and religious components of fish use and consumption among various subsistence populations, particularly Pacific Northwest tribes. *See* Environmental Justice Report, at 56-59.

for Region 10,” and “Washington’s human health criteria were issued by EPA in 1992 through the National Toxics Rule (NTR). The human health criteria are not in the State’s WQS and Washington is one of a handful of states remaining in the NTR for human health criteria.” Ms. Jennings pointed out that in 2000, EPA updated its methodology for deriving human health criteria, recommending that states use a fish consumption rate that accurately represents local populations to be protected wherever local information about fish consumption is available. She then stated, “*EPA believes that a fish consumption rate of 6.5 grams per day is not reflective of fish and shellfish consumers in the State of Washington,*” and that Ecology should examine EPA’s most recent criteria documents and other studies to determine an appropriate rate for criteria that will be protective of the state’s designated uses (emphasis added).

On November 17, 2012, Ms. Jennings sent a letter to Kelly Susewind (Washington State Department of Ecology Water Quality Program) and Jim Pendowski (Washington State Department of Ecology Toxics Cleanup Program) providing comments on Ecology’s draft Technical Support Document for the Sediment Standards. Ms. Jennings repeats statements from the 2010 letter that criteria must protect designated uses, must be scientifically based, and for human health criteria and fish consumption rates, Ecology should use local data as the preferred foundation. Ms. Jennings also repeats that Washington currently has a rate of 6.5 g/day and noted “as identified in your draft document, several studies of Northwest populations indicate that this rate is not reflective of the amount of fish and shellfish consumed by some in the state of Washington. Therefore, it is appropriate and consistent with EPA guidance for Ecology to examine the current science to determine an appropriate fish consumption rate . . . .” Shortly thereafter in the letter, Ms. Jennings stated “we encourage you to quickly incorporate this information [from tribal and other surveys] into your rulemaking process and move forward with adopting revised criteria.” Ms. Jennings summarized that “EPA believes the information is currently available to make decisions on these matters and requests Ecology to quickly move through the process necessary to do so.” She closed by repeating that this is a priority for EPA Region 10.<sup>5</sup>

Finally, most recently, EPA’s Regional Administrator Dennis McLerran wrote to Ecology’s Director Maia Bellon on June 13, 2013 stating: “The best available science includes evidence of consumption rates well above 6.5 grams per day among high fish consumers and shows that the human health criteria currently in effect for clean water purposes in Washington are not sufficiently protective.” Administrator McLerran also points out that “[t]he EPA believes there are scientifically sound regional and local data available in Washington that are sufficient
